

## Syllabus

### EART60071: Measuring and Predicting 2

Semester 1 Lecture: Tuesdays 11:00-13:00, Stopford Theatre 2

Semester 1 Practical: Wednesdays 14:00-17:00, Simon Building 6th floor

#### Core module for:

- MPEC
- MESPOM

#### Optional for:

- N / A

#### 15 credits

### Instructor

Prof. Paul Connolly

Centre for Atmospheric Science

Dept. of Earth, and Environmental Sciences

Simon Building, Room 3.08 (dial 63921 to be admitted)

paul.connolly@manchester.ac.uk

Phone: +44 (0)161 306 3921

### Useful texts

See references at the back.

### Assessment and Feedback

| Assessment                                                        | Weighting |
|-------------------------------------------------------------------|-----------|
| Online test (15 <sup>th</sup> January – 30 <sup>th</sup> January) | 100%      |

See Appendix B for more detail. Feedback is available each week by speaking to the instructors in class. For the online assessments; however, if you feel you would like further clarification, please ask. That's why we're here!

### Requirements

For 2025-2026 academic year this course will be delivered face-to-face. We would like to give you a first class experience of using advanced environmental models and this will involve hands-on experience within the practical sessions.

**Assessment on Blackboard**

There is a webpage accompanying this module: [https://uom-maul1609.github.io/paul.connolly.webpages/teaching/eart60071/eart60071\\_course.html](https://uom-maul1609.github.io/paul.connolly.webpages/teaching/eart60071/eart60071_course.html), where you can see the material for each week. The assessment links will direct you directly to the Blackboard page for assessments, so you will need to input your University username and password (see Appendix B).

**Attendance**

Attendance should be considered to be compulsory.

**Feedback**

You will get feedback on your work in several ways:

- Talk to us in class about your work.
- By completing the practical sessions and discussing your results during the practicals and other sessions.
- I will also spend time in class covering general aspects of the assessments.

---

## Appendix A

# Units and conversions

---

### A.1 Prefixes

Here are some prefixes that are often used when writing scientific numbers.

|           |           |            |                 |
|-----------|-----------|------------|-----------------|
| 10        | deka (da) | $10^{-1}$  | deci (d)        |
| $10^2$    | hecta (h) | $10^{-2}$  | centi (c)       |
| $10^3$    | kilo (k)  | $10^{-3}$  | milli (m)       |
| $10^6$    | mega (M)  | $10^{-6}$  | micro ( $\mu$ ) |
| $10^9$    | giga (G)  | $10^{-9}$  | nano (n)        |
| $10^{12}$ | tera (T)  | $10^{-12}$ | pico (p)        |
| $10^{15}$ | peta (P)  | $10^{-15}$ | femto (f)       |
| $10^{18}$ | exa (E)   | $10^{-18}$ | atto (a)        |

Also not the unit Å (or Angstrom), often used to describe sizes of atoms, which is equal to  $1 \times 10^{-10}$  m.

---

## Appendix B

# Assessment for this course

---

Assessment is as follows:

- **Summative Blackboard assessment:** testing knowledge of the models used. This will count for 100% of your grade for the course.
  - Questions asked will cover the material from all prior weeks.
  - The availability dates for this assessment on Blackboard are between:  
**Thursday 15<sup>th</sup> January and Friday 30<sup>rd</sup> February.**

So there is one real deadline, which is between:

**Thursday 15<sup>th</sup> January and Monday 30<sup>th</sup> February.**
